

HAVE YOU DONE YOUR ANNUAL UNDERBODY PROTECTION ON YOUR VEHICLE YET?

Corrosion Protection: Something we can't do without.

With today's climate change, it is necessary to provide underbody protection. Road salt, splashing water and aggressive chemicals as well as varying weather conditions will accelerate the use for vulnerable components such as the transfer case, fuel tank, etc. Corrosion can proceed in hidden places as well as those which are dented or chipped. Rust weakens the car's bodywork, severely affecting your driving safety, comfort, and spoiling the visual appearance of your car. Since cars are a major investment, it pays to protect them and enhance their resale value.

Art. No. 892.0801 (Amber)
Art. No. 892.0802 (Black)

**Prevent rust from taking
over your vehicle!**
